## Corinth Pipeworks secures major contract for HyNet CO<sub>2</sub> Pipeline in Liverpool Bay

Corinth Pipeworks, a leading global manufacturer of high-performance steel pipes for the energy sector, is pleased to announce its participation in the Liverpool Bay Carbon Capture and Storage (CCS) project in the United Kingdom. The project is operated by Eni as part of the HyNet industrial cluster and marks a key milestone in the UK's energy transition and decarbonisation roadmap.

Under this contract, Corinth Pipeworks will supply and deliver approximately 41 kilometers of Longitudinal Submerged Arc Welded (LSAW) steel pipes and hot induction bends, in diameters of 36", 24", and 20", complete with external anti-corrosion coating, for the onshore and offshore sections of the CO<sub>2</sub> pipeline system.

The Liverpool Bay CCS project forms the backbone of HyNet, one of the world's most advanced CCS clusters, which aims to capture and permanently store industrial CO<sub>2</sub> emissions from the North-West of England and North Wales. The infrastructure will transport captured CO<sub>2</sub> through new and repurposed pipelines to be safely stored in Eni's depleted gas reservoirs beneath Liverpool Bay.

"We are honored to contribute to a project of such strategic importance to the UK's decarbonization goals and global climate efforts," said Ilias Bekiros, General Manager at Corinth Pipeworks. "Our advanced technology, high standards for sour service applications, and commitment to sustainable practices make us a trusted partner for low-carbon infrastructure projects across Europe and beyond."

This contract underscores Corinth Pipeworks' leading position in the European CCS market, supporting key initiatives in carbon management and enabling industrial decarbonization through the delivery of high-specification pipe solutions.

### About Eni in UK

*Eni is a key player in the UK's energy transition, with a strong footprint across the entire energy value chain. This spans from carbon capture and storage (CCS) to Offshore Wind, Fusion Energy and Upstream operations. Eni has launched strategic projects for the decarbonisation of several industrial areas in the country, with the aim of achieving carbon neutrality. Eni is a leading company in the transportation and storage of CO<sub>2</sub>, as part of the HyNet CCS cluster in Northwest of England and North Wales, which will be pivotal for the UK's journey towards a Net Zero future as one of the world's first low-carbon industrial clusters. In the CCS space, the company has also launched the Bacton Thames Net Zero initiative to contribute to the decarbonisation of the most polluting industrial processes in the South East of England. ### **About Corinth Pipeworks**

*Corinth Pipeworks (CPW), steel pipe segment of Cenergy Holdings, is a leading steel pipe manufacturer for the global energy and construction sector. With projects executed in more than 50 countries worldwide, we develop valuable solutions, exceed our customers' expectations whether the application is a challenging offshore subsea flow line, a high criticality onshore gas transmission pipeline, transportation of 100% hydrogen at high pressures through large diameter/high strength steel pipelines, or a specialized structural steel requirement. All this by combining experience, on time delivery, innovation and investments in the latest technology.
